PROFESSIONAL SUMMARY

Full Stack Developer with 5+ years of experience building production-grade React/Next.js applications across SaaS, blockchain, and enterprise platforms. Currently shipping The Business Hub Pakistan, a live multi-portal SaaS product with 6,000+ active users. Fluent across the full stack: React and Next.js on the frontend, Node.js and NestJS on the backend, PostgreSQL and Supabase for data, and N8N for workflow automation. Known for measurable performance gains, clean component architecture, and consistent delivery in Agile/Scrum teams.

TECHNICAL SKILLS

Expert: React.js, Next.js, TypeScript, JavaScript (ES6+), Redux, Zustand, TanStack Query, Material UI, shadcn/ui, Express.js, Tailwind CSS, Node.js, RESTful APIs, Git, HTML5, CSS3

Proficient: NestJS, PostgreSQL, Supabase, Vite, GitHub Actions CI/CD, MongoDB

Familiar: Jest (basic unit tests), React Testing Library (minor exposure), WebSockets, Webpack, Cypress

Practices: Agile/Scrum, code review, component-based architecture, performance optimization (lazy loading, memoization, code splitting)

WORK EXPERIENCE

Heven Solutions | Full Stack Developer — MERN + Next.js & NestJS

Jul 2025 – Present • Lahore, Pakistan

- Delivered The Business Hub Pakistan — a multi-portal SaaS app (admin, investor, founder) with role-based auth, Supabase real-time data, and ApexCharts analytics dashboards — cutting admin reporting time by ~60% for the Meer Group client.
- Wrote basic unit tests using Jest for utility functions and helper modules, supporting QA by catching logic-level regressions before handoff.
- Reduced initial bundle size measurably by implementing code splitting and lazy loading via Vite, improving Time to Interactive on key routes and passing Core Web Vitals thresholds.
- Architected NestJS backend services with optimized PostgreSQL queries, indexing, and normalized schema design, reducing average API response time from ~200ms to ~140ms.
- Participate in Agile sprint ceremonies — planning, stand-ups, and retrospectives — with a cross-functional team, maintaining a consistent two-week delivery cadence.
- Enabled zero-downtime deployments by configuring GitHub Actions CI/CD pipelines to automate linting, testing, and deployment on every pull request merge.

Argon Tech Inc. | React / Next.js Developer

Nov 2022 – Jul 2025 • Lahore, Pakistan

- Owned frontend development of Galileo Protocol — a blockchain-integrated web platform — over a 2.5-year engagement, building and iterating a React.js + Redux codebase across 50+ components and multiple feature cycles.
- Achieved 35% reduction in UI load time through memoization, component-level code splitting, and eliminating redundant re-renders on a data-heavy, real-time blockchain interface.
- Cut state-related bugs by ~40% by refactoring global state from prop-drilling to a structured Redux architecture with typed slices and selectors.
- Shipped a community Voting Platform MVP in 6 weeks by building reusable proposal, voting, and comment components using React.js and Chakra UI.
- Maintained 95%+ UI consistency across devices by building a shared Material UI component library with custom theming, adopted across 3 concurrent products.
- Reduced regression risk by participating in structured Agile code reviews and supporting QA with detailed component documentation and edge-case callouts.

XISLABS | React JS Developer / Front End Developer

Jun 2021 – Nov 2022 • Lahore, Pakistan

- Improved data collection efficiency by ~50% for Tammam — a dynamic form platform — by building admin and user-facing React.js workflows with RESTful API integration, cutting report-submission time from ~10 min to ~5 min per user.
- Reduced invoice processing errors by ~30% for Fatoraty POS by implementing Redux state management to synchronize product, inventory, and invoice data in real time across the application.
- Increased Lighthouse performance scores by 20 points by migrating class-based components to functional React with Hooks, reducing unnecessary re-renders and lifecycle overhead.

- Improved codebase maintainability by enforcing TypeScript strict typing and modular component design, reducing onboarding time for new developers.

Workwox | React.js Intern

Feb 2021 – Jun 2021 • Sahiwal, Pakistan

- Built and iterated on 8 frontend components using React.js, gaining hands-on experience with component lifecycle, props, state, and RESTful API consumption under senior developer mentorship.

KEY PROJECTS

The Business Hub Pakistan — Meer Group (Nov 2025 – Present)

- Built a live role-based SaaS portal (admin, investor, founder) with Supabase auth, real-time database, and row-level security — serving 6,000+ active users with proposal workflows, bulk notifications, and verification flows.
- Delivered admin analytics dashboards tracking signups, logins, blog views, and lead trends using ApexCharts, reducing manual reporting effort by ~60%.

Covis — AI-Driven Enterprise SaaS (Jul 2025 – Present)

- Built frontend modules for an AI-powered multi-tenant enterprise platform — AI agent deployment dashboards, automated proposal generation flows, client management portals, and real-time workforce analytics.
- Engineered a full Jira-style project management module: per-user project assignment, ticket creation, Kanban board with drag-and-drop, sprint planning, and backlog management — giving enterprise teams end-to-end delivery visibility in one platform.

React.js, Vite, Supabase, Tailwind CSS, shadcn/ui, ApexCharts, N8N Automation | thebusinesshub.pk

Next.js, NestJS, PostgreSQL, Tailwind CSS, shadcn/ui, GitHub Actions | covis.ai

EDUCATION

University of Arid Agriculture, Sahiwal | BSc Computer Science

Sep 2016 – Sep 2020 • Pakistan

Punjab College Sahiwal | FSc Pre-Engineering

Jun 2014 – Aug 2016 • Pakistan
